

Sensory Room

Our amazing Sensory Room uses light, sound and a range of special effects to create a calm, relaxing learning space.

Featuring a vibro-acoustic 'ball pool', students can lie in comfort and literally 'feel' the music.

As the student is nestled inside, activating an interactive bubble tube plinth controls the bubbles and lighting at the same time as a fibre-optic wheel changes colours.

A fibre-optic 'swish' of fibres that change colour along their full length encourages focus while a projector wheel rotator invites visual scanning across the floor and walls.

Students feel safe, stimulated and fully engaged.
